## Washing and Care Instructions For Your New BubuBibi Nursing Pad

Please follow all these instructions for best results

### Before Use

You can pre-wash the nursing pads. Select cold rinse and spin.

### After First Time Use

1. Soak pads in warm water for 2 minutes and then squeeze (do not wring) by hand 3-4 times under warm running water to rinse out breast milk that's been absorbed through all the layers.
2. Hand wash or machine wash. If it is machine wash, please do not overload your washer. Use Hot or Warm water and cold rinse.
3. Optional – Add ½ cup of baking soda to cut down odors. ½ Cup of vinegar to soften, whitens, sanitize, remove soap residue and deodorize.
4. Best to hang nursing pads outside in the sun – Natural sunlight naturally help reduce stains, naturally whiten and also environmental friendly. If dryer is a used, dry nursing pad under low heat.
5. Do not use fabric softener. It will reduce the nursing pad's absorbency. Please use vinegar; it is better and using fabric softener.
6. NEVER use bleach or detergent that contains chlorine bleach. It will shorten the nursing pad's life.
